

ENDURA 12
EASILY SPOT AND ELIMINATE TWIST

EASILY IDENTIFY LINE TWIST WITH NEW 2-COLOR ENDURA 12

When twist is eliminated from a braided rope, it is stronger and more durable. Even small amounts of twist can make a significant difference in strength, performance, and the overall service life of your lines. But twist is often difficult to spot - until now!

Now Endura 12's 2-Color option makes twist much easier to see because when it comes to twist, what you can't see can really hurt you.

TEUFELBERGER Fiber Rope Corporation

oil and gas segment. In addition, we are providing wire rope installation for well servicing and crane rental companies." says Craig Hayward, Chief Sales Officer of Mazzella Companies.

Craig also states, "Our Branch Manager, Tyler Henley, has over ten years of experience in the rigging and specialty rope industry. His professionalism and relationships throughout the region offer us a unique perspective and an opportunity for rapid growth."

Mazzella will maintain an inventory of wire rope, specialty ropes, fall protection, chain and fittings, synthetic slings, rigging hardware, hoists, hoist parts, pullers and other related rigging products.

"This is an exceptional opportunity for me to grow as an individual with an established and successful organization like Mazzella Companies, while continuing to build on my experience in the oil and gas market. Mazzella has a 62-year history of being an innovator with vast and growing manufacturing and fabrication capabilities." says Tyler.

Tyler graduated from the University of Central Oklahoma and started with Howard Supply an oilfield supply company in 2007. He worked in sales; focusing on the well servicing market. This experience led into the wire rope industry.

In 2010, Tyler made the move to a cable spooling service business and focused solely on the well servicing business.

He used his vast knowledge on the spooling and install business to transition into the mobile crane business. This new endeavor will further increase his product knowledge and experience in the rigging business, as well as, move Mazzella into a completely new industry and service offering.

Rope and Sling supplies lifting gear for major Falklands project

Rope and Sling Specialists (RSS) has supplied lifting and rigging equipment for the Mare Harbour upgrade project, part of a massive modernization of the military infrastructure on the Falkland Islands, a British overseas territory off the coast of Argentina.

Mare Harbour is a small settlement on East Falkland, on Choiseul Sound, primarily used as a port facility and depot for RAF Mount Pleasant, located about 15km north. An upgrade is underway to make the harbour suitable for larger vessels, namely the POINT Class ships, with roll-on roll-off capability of the Falkland Islands Resupply Ship (FIRS). There are approximately

10 FIRS sailings per year, which deliver military supplies including hardware, food and commercial freight to the Falkland Islands.

RSS has supplied wire rope slings, web slings, round slings, shackles, hydraulics, chain slings and wire rope to civil engineering and maritime service provider VolkerBrooks, part of VolkerStevin, which agreed the £19m upgrade—£180m will be invested in the Falklands over the next 10 years—with the Defence Infrastructure Organisation (DIO).

Alan Varney, Depot Manager at RSS headquarters in Bridgend, Wales, said: "The opportunity to supply such a landmark and important project represents a great start to 2017 and once again demonstrates our capability to manufacture and source lifting equipment for demanding applications to a short lead time."

RSS received the order on January 9th and committed to delivery to Morecambe in Northwest England two weeks later. The shipment, which filled 15 pallets, included 35t and 25t capacity wire rope slings manufactured by RSS in addition to chain slings of various sizes that were also assembled at the South Wales facility.
