nel lifting requirements. With factory-designed accessories, workers can be more efficient and productive than ever. For example, the Shuttlelift Carrydeck Industrial Cranes include a line of industrial cranes offering a durable and

versatile crane, all in a compact design as well. As an added benefit, Carrydeck cranes are designed for both indoor and outdoor job sites. These cranes also have telescoping booms as well as a load deck for material handling.

The Boscario crane attachments are

from a solid and dynamic Italian firm engaged in the design, manufacturing and marketing of construction equipment. Boscario management and technical design team members keep in continual dialog with the construction sector to ensure that existing and new Boscario products meet or exceed their customer's needs and specific requirements. Boscario even does custom engineering and manufacturing to specific customer requirements.

Product development involves research using modern data-processing systems that guarantee reliable calculations and drawings. Each product then undergoes severe real world testing before it is introduced to the market.

Ever since 1969, when founder John L. Grove invented the first self-propelled boom lift, Sims Cranes has been working hard to find ways to make jobs easier and safer. With such hardware as the latest development mentioned above, it is easy to see why Sims Cranes has been there for as long as they have, changing the landscape in many ways for those visiting or deciding to stay in the Sunshine State. And wire rope in tandem with cranes of all sizes, in the end has made all of that possible. **WRN**
