Mr. Nakamura next to the WIROP WP-6000 Swaging Machine

A new milestone in wire rope fabrication field: WIROP WP-6000 swaging machine

Wirop Industrial Co., Ltd (WIROP) was established in 1979 and was the first company to manufacture the swaging machine in Taiwan. We've been supplying wide range of machines, wire rope fabrication equipment and accessories to more than one thousand clients in more than 80 countries.

In 2016, considering the market needs of wire ropes in the biggest sizes as well as bridge cables production, Nakamura Industry Co., Ltd. in Kobe, Japan, placed an order of swaging machine with the biggest capacity (WP-6000 with 6000

metric tons). Under the process of developing an unique and customized swaging machine, WIROP team discussed with the buyer, President Mr. Tetsuya Nakamura many times. It's including the convenience of usage, operation height, factory building plans, wire rope fabrication needs, etc.

When the machine's in commissioning in May 2017, the pressure capacity of WIROP WP-6000, has incredibly reached 6,112 Metric Tons (6,737 US Tons). On the buyer's grand opening ceremony in Kobe, Japan, the clients were amazed by the machine capacity and quality very much.

Wirop Industrial Co., Ltd has built up a new milestone in the wire rope fabrication technology, and will continuously exceed clients' expectations to provide the great services for the wire rope industry.

Columbus McKinnon Expands CM Tornado 360° Hoist offering to include 3 and 6 ton units

Innovative ergonomic hoist features unique Sidewinder™ lever handle for safe and efficient use

Columbus McKinnon Corporation, a leading designer, manufacturer and marketer of material handling products, systems and services, has expanded its CM Tornado 360° ratchet lever hoist product line to include new 3 and 6 ton capacity units. Ergonomically designed for increased safety, the patent-pending CM Tornado 360° allows the operator to be more productive with significantly less effort compared to conventional ratchet lever tools.

"Since the initial launch of the CM Tornado 360° late last year, we have continued to look for ways to make this innovative hoist even more versatile for our customers," said Andre Schon, Se-

nior Global Product Manager – Manual Hoist Products. "With the addition of 3 and 6 ton units to our initial 3/4 and 1-1/2 ton offering, we have rounded out our product portfolio and given customers even more options for their lifting, positioning and pulling applications."

The CM Tornado 360° redefines ratchet lever hoists with its unique Sidewinder lever handle. The Sidewinder lever handle features a 360° rotating lever and a fold-out revolving handle. Working in unison, these integrated components allow the operator to realize the full potential of 360° rotation while working in a safe and ergonomic position. This helps reduce repetitive wrist action experienced with traditional lever hoists, letting the operator utilize a full 360° range of motion to work up to 12 times faster.
