space; it is reinforced to protect the hook against impacts. The dedicated space for the placement of the pin has enough of an area to load a lifting points of up to 100mm in diameter; and, two, a pushbutton that can be used instead of automation. However, Fillol does not anticipate its widespread utilization.

Crescent/Lufkin® Introduces New Self-Centering Tape Measure

Redesigned tape measure is more comfortable and is engineered for longer life.

Crescent/Lufkin®, a premier hand tool brand from Apex Tool Group, today announced the introduction of a redesigned version of its popular Self-Centering Tape Measure, which makes finding the midpoint of measurements quick and easy. Improvements include a new ergonomic case for added comfort and a quad-riquet end hook for extended blade life.

The Crescent/Lufkin Self-Centering Tape Measure is perfect for hanging pictures, finding the midpoints of walls, and many other measuring jobs around the house. It features unique blade markings, resulting in a tape that takes the math out of finding the midpoint of any measured distance. A black upper scale shows the actual measurement; a lower scale directly beneath it shows the midpoint in red. For example, if the upper scale reads 2-1/4", the lower scale will show 1-1/8".

"This Self-Centering Tape Measure has been improved based on extensive analysis of user needs," said Kevin Fitzpatrick, Product Manager – Branded Trade Tools. "The new dual material co-molded case fits the hand and provides improved comfort and control, while the new quad-riquet end hook will provide substantially longer blade life."

The Crescent/Lufkin Self-Centering

The Crescent/Lufkin® Self-Centering tape makes finding the midpoint of measurements quick and easy.

Tape Measure (Catalog No. L725SCT-MPN) is available in store and online from hardware retailers and home improvement centers and from online retailers. For more information, please visit <http://bit.ly/2H2zqkr>.

Gearwrench® Introduces New Adjustable Spanner Wrenches

Available in three styles for use in different applications

Gearwrench®, a premier hand tool brand from Apex Tool Group, unveiled a new line of Adjustable Spanner Wrenches. The wrenches are available in three styles to work with different industrial applications.

Gearwrench Adjustable Spanner Wrenches are designed to reliably tighten or loosen threaded collars, lock nuts, rings, and packing nuts commonly found on industrial equipment and tooling. Spanners are offered in three styles: Face, Pin, and Hook. Their ad-

justable heads (or spans in the case of face style wrenches) allow them to be used on a range of collar sizes, eliminating the need for dedicated wrenches for every size application. Each is made of alloy steel and features a hard stamped size marking on its handle. Pin style wrenches also have pin diameter hard stamped on their handles. All have a black oxide finish for corrosion resistance and for use in locations where plated products are not allowed. All styles and sizes, where official specifications exist, meet or exceed GGG-W-665C Specification.

"These new adjustable spanner wrenches are another example the broad scope of the Gearwrench tool offering," said James Stewart, Senior Product Manager. "Their quality design, material, and finish provide unsurpassed durability and value."

Three sizes of Face Style Gearwrench Adjustable Spanner Wrenches are offered, the largest of which has a capacity of up to 4 inches. There are six Pin Style wrench sizes with capacity ranges from 3/4" – 2" to 4-1/2" – 6-1/4" and three Hook Style sizes with capacity ranges from 3/4" – 2" to 2" – 4-3/4". All are available from automotive warehouse distributors, mobile dealers, online retailers, and from industrial and commercial distributors.
